Discussion

On July 31, 2003, we published amendment 25-111 to 14 CFR part 25 (68 FR 45046). That amendment added new fire protection requirements applicable to thermal/acoustic insulation materials. It introduced a new test method and requirement that improves the fire penetration resistance of those materials, and added new test requirements related to flame propagation and burnthrough penetration resistance.

We have developed two draft advisory circulars to assist in demonstrating compliance with amendment 25-111. These ACs are:

- AC 25.756-1X, "Thermal/Acoustic Insulation Flame Propagation Test Method Details." This AC describes the test method to determine the flammability and flame propagation characteristics of thermal/acoustic insulation materials. It addresses issues such as test sample construction, test conduct considerations, and the applicability of amendment 25-111 to certain materials and installations.
- AC 25.856-2X, "Installation of Thermal/Acoustic Insulation for Burnthrough Protection." This AC provides guidance concerning the test method to determine the burnthrough resistance of thermal/acoustic insulation materials installed in transport category airplanes. Also included is guidance on the installation details and techniques, as well as test condition details.

Issued in Renton, Washington, on December 3, 2004.
